Ambitious Study Shows Promise of Precision Medicine

Through the Health eHeart Study, physicians hope to better understand how the heart functions and to develop new ways to predict and prevent cardiovascular disease. The study aims to enroll 1 million people from around the world.

OME 2013: UCSF to rally national leaders to advance precision medicine
UCSF Dominates National Rankings
The UCSF School of Medicine ranked fourth nationwide in both research and primary care education this year, according to a new survey conducted by *U.S. News & World Report*.

"Mission Hall" Breaks Ground
With a $20 million gift from philanthropist Chuck Feeney through his foundation Atlantic Philanthropies, UCSF has broken ground to construct the Global Health & Clinical Sciences Building at Mission Bay.

Decision-Making Linked to Memories
Scientists have discovered how memory recall is linked to decision-making in rats. They showed that measurable activity in one part of the brain occurs when rats in a maze are playing out memories that help them decide which way to turn.

Pulse is a publication of the Office of University Relations at UCSF.
