

UCSF Mission Bay Campus

UCSF Mission Bay is a health sciences campus for discovery, education and health. It is one of three main UCSF campus sites; the others are located at Parnassus Heights and Mount Zion.

Current Programs and Buildings

UCSF Medical Center at Mission Bay

The new 878,000-square-foot hospital complex for children, women and cancer patients is a model of innovative and sustainable design. The 289-bed hospital complex opened in February 2015, and is the city's first new medical center in decades. The medical center includes the new 183-bed UCSF Benioff Children's Hospital San Francisco, providing urgent and emergency care, primary care and specialty outpatient services; the UCSF Betty Irene Moore Women's Hospital, offering cancer care, specialty surgery and a 36-bed birth center; and the 70-bed UCSF Bakar Cancer Hospital for cancer patients, which also includes select outpatient cancer services. An on-site helipad improves access to lifesaving care for critically ill patients. By locating the new medical center at Mission Bay, UCSF is bringing together basic scientists, clinical researchers and physicians to share resources, insights and ideas, and speed the translation of discoveries into treatments to benefit patients.

UCSF Global Health and Clinical Sciences Building

Mission Hall provides space for 1,500 faculty and staff, including the UCSF Global Health Sciences program, as well as clinical faculty working in the hospitals across the street. It also provides space for the UCSF Chancellor and several academic research units that currently lease facilities nearby. With 265,000 square feet, the building opened in October of 2014.

The Sandler Neurosciences Center

The five-story, 237,000-square-foot building brings under one roof several of the world's leading clinical and basic research programs focused on finding new diagnostics, treatments and cures for such intractable neurological disorders as Alzheimer's disease, Parkinson's disease,

Significance to the City

UCSF Mission Bay is the anchor of the entire Mission Bay redevelopment project, and was launched as San Francisco's largest urban development since the building of Golden Gate Park. The city's Mission Bay development covers 303 acres of land between the San Francisco Bay and Interstate 280.

Size and Location

A 60-acre site, UCSF Mission Bay is located near the S.F. Giants baseball park, about one mile south of San Francisco's Financial District. About 2.2 acres are set aside for the San Francisco Unified School District as a public school site.

The Land

UCSF Mission Bay transforms land once occupied by old warehouses and rail yards. The initial land parcel included 29.2 acres donated by Catellus Development Corporation and 13.2 acres donated by the City of San Francisco. Between 2005 and 2007, UCSF secured land for an adjacent 14.5-acre site for the new UCSF Medical Center at Mission Bay. In 2014, 3.8 acres east of Third Street were added.

Timeline

UCSF broke ground for the Mission Bay campus in 1999, and opened the first building, Genentech Hall, in 2003. Today, the campus is flourishing. It includes numerous research buildings and outpatient clinics, a Medical Center, a community center and student housing. Construction of additional buildings to continue over the next 15-20 years.

Population

Including faculty, staff, students, patients, hospital visitors and campus housing occupants, the daily population of the Mission Bay campus is just over 5,700 people.

multiple sclerosis, stroke, migraine, epilepsy and autism. Occupancy began in January of 2012.

Genentech Hall

A five-story, 385,000-square-foot building, it houses programs in structural and chemical biology as well as molecular, cellular and developmental biology. It also houses the Molecular Design Institute, Nikon Imaging Center and the Center for Advanced Technology. The first wave of faculty moved into the building in January 2003.

Arthur and Toni Rembe Rock Hall

This 170,000-square-foot building houses programs in human genetics, developmental biology, developmental neuroscience, and the Center for Brain Development. Occupancy of the five-story research facility began in February 2004.

Byers Hall: the California Institute for Quantitative Biosciences (QB3)

This is the headquarters for QB3, a cooperative effort among three UC campuses – Berkeley, San Francisco and Santa Cruz – and private industry that harnesses the quantitative sciences, such as physics and computer science, to advance our understanding of biology. The Institute has a three-fold mission of supporting the quantitative biosciences, translating basic research into products to benefit society and developing the California bio-economy. QB3 is one of four California Institutes for Science and Innovation created in 2000 to nurture the state's leadership in the most promising scientific industries. The building has 154,000 square feet; occupancy began in February 2005.

William J. Rutter Center

The four-story building is a recreation and conference center for both UCSF and the community. The Center houses a fitness complex, including indoor and rooftop pools, a conference facility, assembly room, activity center and student services. The Bakar Fitness and Recreation Center opened in October 2005. It has about 6,800 members. The conference facility began operations in November 2005. Catering services and a café opened in March 2006.

Mission Bay Housing

UCSF's residential housing complex for students, postdoctoral scholars, visiting faculty and their families now houses 896 residents. Residents began moving in during the fall of 2005.

Child Care Center

The University Child Care Center at Mission Bay serves about 80 children, up to age 5. It opened in May 2006.

Smith Cardiovascular Research Building

Headquarters of the UCSF Cardiovascular Research Institute established in 1958, CVRB is home to nearly 500 research scientists and clinicians who focus on achieving new understanding and treatment for cardiovascular disease. The building's first floor houses the UCSF Cardiovascular Care and Prevention Center. The 236,000-square-foot building was first occupied in the fall of 2010. The building was approved for LEED Gold standards by the U.S. Green Building Council in September 2012, making it the first UCSF laboratory building at Mission Bay to achieve this status.

Helen Diller Family Cancer Research Building

This five-story, 162,000-square-foot building is home to scientists investigating cancer's basic biological mechanisms, including brain tumors, urologic oncology, pediatric oncology, cancer population sciences, and computational biology. The building was occupied in May 2009.

Orthopaedic Institute

The OI is a major center for outpatient treatment, research and training in musculoskeletal conditions, injuries and sports medicine. It is the first UCSF clinical service at Mission Bay and includes a Human Performance Center and Orthotics and Prosthetics Center. Housed in a non-UCSF building adjacent to the campus, OI opened its new quarters in October 2009.

Parking

The Mission Bay campus includes three parking structures: a 600-car garage adjacent to the William J. Rutter Center, an 820-car garage facing Third Street, near the housing complex and 1,049

parking spaces in a surface lot and 10-story garage at the new hospital.

Retail Services

A variety of retail services are located in the plaza in front of the housing complex. The first businesses opened in summer 2007.

Open Space

The UCSF Mission Bay campus includes Koret Quad, a 3.2-acre space designed to serve as an informal, landscaped gathering place for the public as well as faculty, staff and students. The entire campus will have at least eight acres of publicly accessible open space upon completion.

Public Art Program

UCSF launched a public art program at UCSF Mission Bay to create a visually stimulating environment that would enrich campus life, benefit the local community, and provide a permanent legacy to the City of San Francisco. The program is supported by a commitment of one percent of privately funded construction costs for new buildings. Art works are installed both inside buildings and outside in Koret Quad and in the plaza. In June 2010, the art collection was named the "J. Michael Bishop Art Collection at Mission Bay" in honor of the former UCSF chancellor who established the program as an integral part of the campus development.

UCSF-affiliated Gladstone Institutes

UCSF launched a public art program at UCSF Mission Bay to create a visually stimulating environment that would enrich campus life, benefit the local community, and provide a permanent legacy to the City of San Francisco. The program is supported by a commitment of one percent of privately funded construction costs for new buildings. Art works are installed both inside buildings and outside in Koret Quad and in the plaza. In June 2010, the art collection was named the "J. Michael Bishop Art Collection at Mission Bay" in honor of the former UCSF chancellor who established the program as an integral part of the campus development.
